

Client: United States Tennis Association

Broadcast Village

Temporary Space

Triumph has created a Broadcast Village to house the media and broadcasting equipment for the U.S. Open, which will be used for decades. Every August, Triumph provides more than 16,000 sq ft of modular space and installs the buildings in just five days.

The Broadcast Village features over two dozen high-quality mobile offices and a 1,500 sq ft outdoor dining patio with aluminum railings. The decking is made of Trex composite products, a unique combination of reclaimed or recycled wood and plastic fibers. Aluminum decking, walkways, railings, and staircases run along one side of a fully assembled modular village. The interior of the modular units was uniquely built to accommodate the cooling environment requirements for the broadcasting equipment. The customers' building specifications required two HVAC units per module, whereas standard specifications require one HVAC unit per module. Triumph Modular made this customization to meet the customers' needs.

After the August event, Triumph will disassemble and store the buildings for use at next year's U.S. Open.
