

Client: Bristol Myers Squibb

Bristol Myers Squibb

Multi-Building Construction Project

The site at Devens has required a combination of modular units to provide temporary space to support the Bristol Myers Squibb's manufacturing facility construction project. Triumph Modular has supplied more than 36,400 sq ft of modular space for office, conference, orientation, safety, and bathroom facilities.

Over a period of 24 months, Triumph Modular reacted to the growing need of the custom temporary space the project demanded. The buildings are Triumph Modular's "Pro Space" style modules, including T1-11 exterior siding, steel exterior doors, vinyl insulated windows, and vinyl-covered gypsum interior walls, providing a comfortable, professional working atmosphere necessary for the extensive project.

Since 2004, Triumph Modular has maintained a healthy working relationship with BMS. Over the years, the construction project has gone through three phases to include multiple small campuses that continue to serve BMS as they await the completion of their permanent facility.
