

Client: Carroll School

The Carroll School

Classroom Building

Triumph Modular installed the nation's first truly high-performing relocatable modular classroom at the Carroll School in Lincoln, Massachusetts. Collaboration years in the making, the building won international acclaim and top honors for green modular design by the modular Building Institute.

Designed to achieve certification under the LEED rating system, it provides occupants an ideal learning environment with natural lighting, better air quality, and improved acoustics while being sensitive to energy consumption and the natural surroundings. From start to finish, this new educational space took only six weeks to build and was installed on-site in just five days. Speed, Sustainability, and Savings - that is what Triumph Modular achieved for the educators, students, and the Carroll School.
